

The Secretlab MAGNUS Pro features an extremely sturdy and durable steel chassis, and is made to last. Proper and regular care however, is advised to ensure it continues to stay in good condition for a long time.

SECRETLAB MAGNUS PRO

Do not use your desk outside of its intended purpose

Improper use can damage your desk or even cause injuries. To ensure your safety, always follow the usage instructions.

Do not overload your desk

Never place items heavier than the indicated maximum weight capacity of your desk. Doing so may affect your desk's ability to function as intended.

Clean the metal desk top with slightly damp cloth

Use a solution of mild soap and warm water applied to a damp cloth to remove dirt and impurities from the surface or accessories. Dry with a clean cloth immediately afterwards.

Do not use abrasive scrubbers or harsh cleaners

Avoid abrasive cleaners as they can damage the powder-coated finish of your desk, potentially exposing the underlying metal to rust-inducing moisture.

Avoid excessive exposure to direct sunlight and heat

Keep your desk away from direct sunlight and avoid exposure to heat sources over prolonged periods, as fading and cracking of the surface finish may occur.

Do not abuse the Secretlab MAGNUS Pro

Even the toughest of desks will not be able to stand up to constant rough and inappropriate use. Keep your desk away from regular impacts, drops and sharp objects.

Do not place hot items directly

Never place hot items directly onto the metal surface of your MAGNUS Pro desk. Always use the desk mat where available, or coasters and laptop stands to protect the surface from extreme heat.

Do not open electrical components

WARNING: Do not attempt to open the housing of Control Box, Control Panel, Leg Columns and Motors. There are no user serviceable parts in these components. Should your desk require servicing, contact our customer support for assistance. Never operate (height adjustment and power module) this workstation if it has a damaged cord or plug.

Keep desk frame away from liquids

WARNING: Humidity may damage the electrical components and operating system. Prior to cleaning, the desk must be disconnected from the power supply. Clean only with a dry or slightly damp cloth and make sure to allow it to dry sufficiently. Do not spray cleaning solutions directly onto the desk's electrical components.

Secretlab MAGPAD™ Leatherette Material

The leatherette is resistant to stains and easy to clean. For dirt and stains simply wipe the leather clean using a cloth slightly dampened with water. Leave the desk mat to dry completely after cleaning. Vacuum to remove loose particles or dirt. To avoid scratching the leatherette, exercise care when vacuuming and use a soft brush attachment.

For more effective cleaning, use a leather cleaning product such as our **Secretlab Premium Leather Cleaner**. Spray a small amount onto a clean microfiber cloth and gently wipe the leather surface.

For a quick, regular maintenance, we recommend our **Secretlab Leather Wipes**. Wipe down your desk mat and allow it to fully dry before using.

Secretlab MAGPAD™ Microsuede Material

The microsuede material is delicate and requires regular care. Keep the material's surface dry at all times. On a regular basis, dust with a dry microfiber cloth to prevent dirt build up.

To remove any loose particles and dirt, dust the upholstery using a soft brush or a vacuum cleaner. Ensure that you dust against the grain of the upholstery.

Microsuede is not water-resistant, so keep them away from water. Any spills should be promptly soaked up with a dry, absorbent cloth or paper towel. Avoid the use of printed absorbent cloths or paper towels as they can release ink onto the material.
